

Projects

○ Personal Portfolio Website – From Wireframe to High-Fidelity UI to Website

This project showcases the complete UI design process for my personal portfolio website, starting with a low-fidelity wireframe and progressing to a polished high-fidelity design in Figma.

  

○ Cozy Pixel Themed To-Do and Pomodoro

Initially conceptualized and designed in Figma, this pixel-art inspired productivity application was later developed into a fully functional website. It combines a To-Do List and Pomodoro Timer to provide a simple, engaging, and user-friendly productivity experience.

  

○ Ride Sharing App Prototype

This prototype showcases a clean and user-friendly ride-booking mobile app designed in Figma, featuring onboarding, authentication, ride booking, and a streamlined user experience.

○ Inventory Management System

A desktop-based inventory management application built with C++ and Qt, featuring user authentication and inventory management functionality.

○ Food Court

A full-stack food court management system featuring separate admin, mobile, and backend components for managing food ordering and restaurant operations

○ MediConnect

A web-based hospital management system built with PHP, JavaScript, CSS, and MySQL, providing dedicated interfaces for managing doctors, patients, departments, and hospital operations.
